Sun Air Jets Certified by Leading Aviation Safety Organizations

Camarillo, Calif. – At a time when aviation safety is at the forefront of many travelers’ minds, Sun Air Jets is proud to announce its recent safety designations with four of the industry’s leading independent aviation auditing services.

Having satisfied the highest of flight operations and safety management standards of Wyvern Consulting Ltd., Aviation Research Group/US (obtaining Platinum status, the highest designation possible), the International Standard for Business Aircraft Operations, and the Air Charter Safety Foundation, Sun Air has demonstrated it has met the stringent requirements of all four of the major independent aviation safety auditing organizations.

“To the best of our knowledge, Sun Air Jets is the only executive charter service to have successfully satisfied the criteria of all four safety management compliance organizations,” said Stephen Lassetter, president of Sun Air Jets. “I believe this speaks to the quality of our operation.”

Sun Air is headquartered at the Camarillo Airport, conveniently located between Southern California hot spots Los Angeles and Santa Barbara. In addition to offering charter flights worldwide, Sun Air also specializes in aircraft management, maintenance, aircraft fueling and ground handling services.

For more information on Sun Air’s certifications, visit the Air Charter Safety Foundation at www.acsf.aero, Wyvern at www.charterx.com, IS-BAO at www.ibac.org and the ARG/US at www.aviationresearch.com.
